Freelance
From August 2013 until August 2014 in my spare time I was working as a Freelancer. The biggest project was Fairlay, a bitcoin betting website—for which I designed the corporate identity, including the logo and built the front end.

2011 April

Tabula Education Center
Web Design & Developer
Working with the adult education center got me interested in webdesign and development from an early age. I was responsible for print, webdesign and for managing all of Tabula's websites and webapps. I've had great chances to work on a number of EU projects as well, developing promotional materials and websites.

2024

SCAILEX

From 2018 until 2022 my main client, Scaillex (previously VerbraucherRitter), has taken up almost all of my capacity. I've been supporting them in building a backend CRM system which handles and automates the diesel emissions scandal claims as well as the lawsuits.

Professional Skills

Languages:

PHP, MySQL; Javascript, HTML, CSS, Sass

Tools & Platforms:

Docker, Git, Github, Composer, NPM, Webpack, MVC, OOP, ORM, RESTful APIs, AJAX, OAuth, Google Analytics

Libraries & Frameworks:

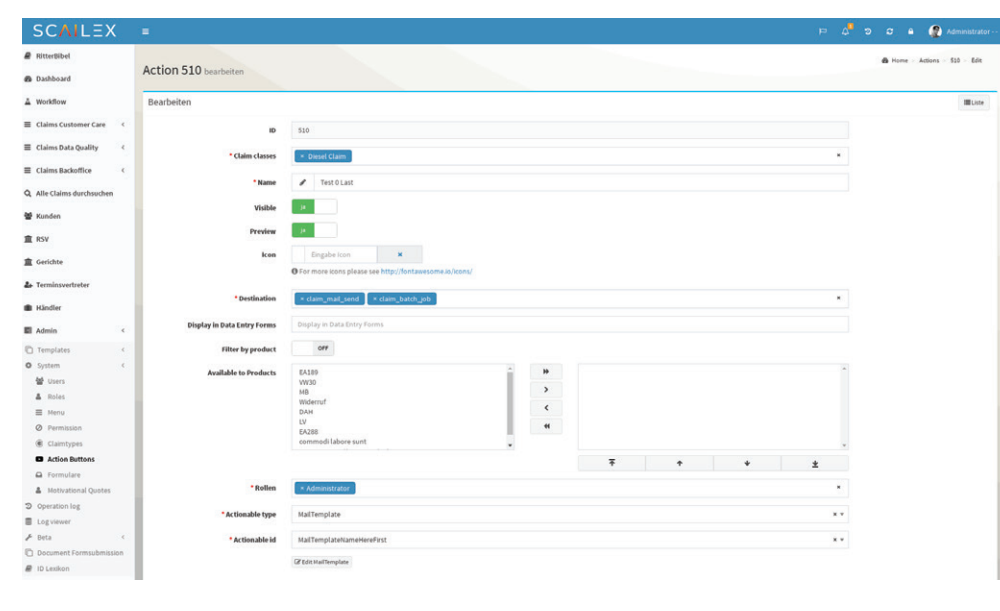

Laravel, Wordpress; Filament, Alpine JS, Tailwind CSS, Bootstrap

Software:

VS Code, Adobe Illustrator, Photoshop, InDesign

Highlighted projects

Scaillex (Verbraucherritter)

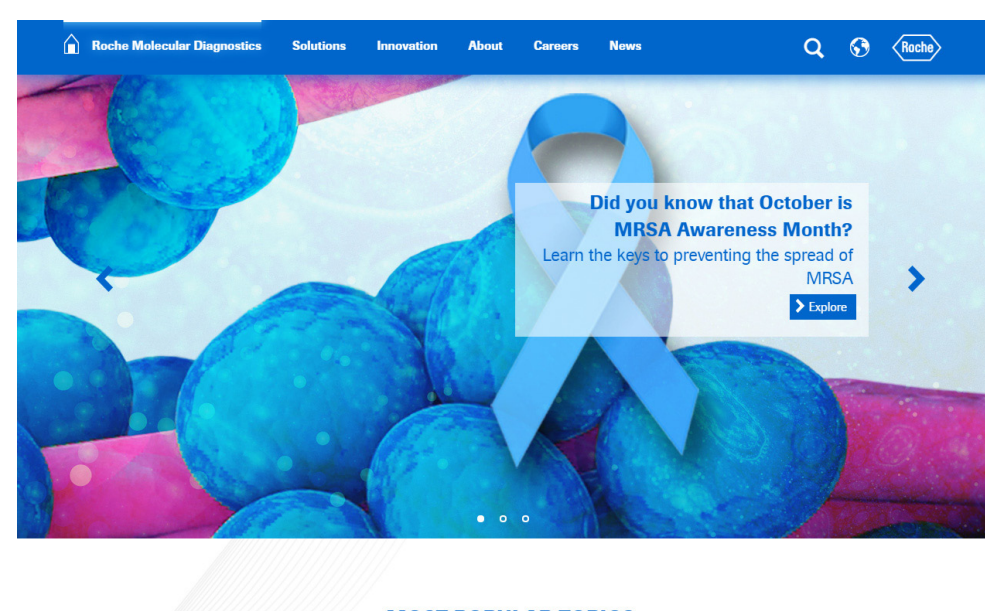

My main points of contribution were the creation of reminders, appointments, emails and messages functionality. For these features I've created the models, database migrations, routes, views, coded the controllers, created the frontend templates as well as the javascript. Secondary focus was optimizations, from restructuring templates to asset management.

Due to the large team of developers collaborating, code standards and testing was important. I've implemented the majority of the browser tests (Laravel Dusk) for the whole project, as well as unit and integration tests (PHPUnit) for the functionality I've developed.

The platform is built on a Laravel backend, using laravel-admin administrative interface builder and is used by an internal team of over 150 people daily.

Key features:

- robust and scalable solution
- continuous integration pipeline
- Laravel framework with laravel-admin
- conditional and extensive validation: address, IBAN, device, email, etc.
- complex architecture and model relationships
- integration of 3rd party solutions (ex. email service, S3, etc.)

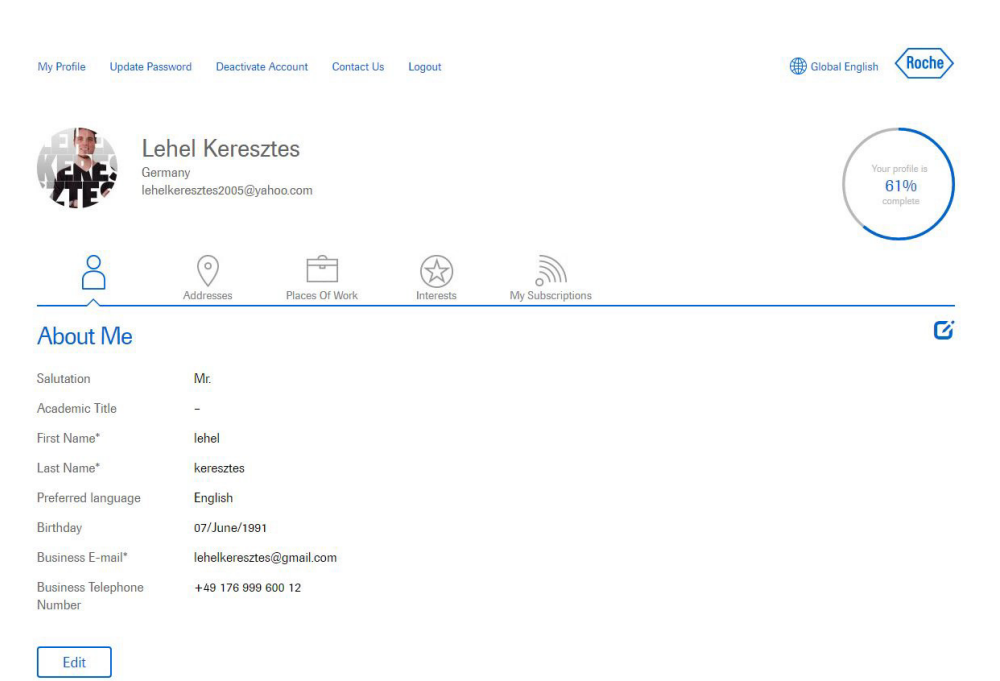

Roche Molecular

I was responsible for the re-launch of Roche's global website for molecular diagnostics. This site is powered by WordPress making it easy for content editors to create new articles or modify existing ones.

The site aims to give information about Roche's developments and instruments in the field of molecular diagnostics. It showcases the various tools such as Assays and Systems Roche offers and the relations between them—related products, compatibility.

Key features:

- Wordpress CMS
- Bedrock and Sage theme with theme wrapper
- custom post types and custom taxonomies
- AJAX loading via RESTful API for more articles
- custom post filtering
- extensive caching
- media optimization via Gulp build system
- bower and composer package managers
- served over HTTPS
- fully responsive front end
- custom Google Analytics event tracking

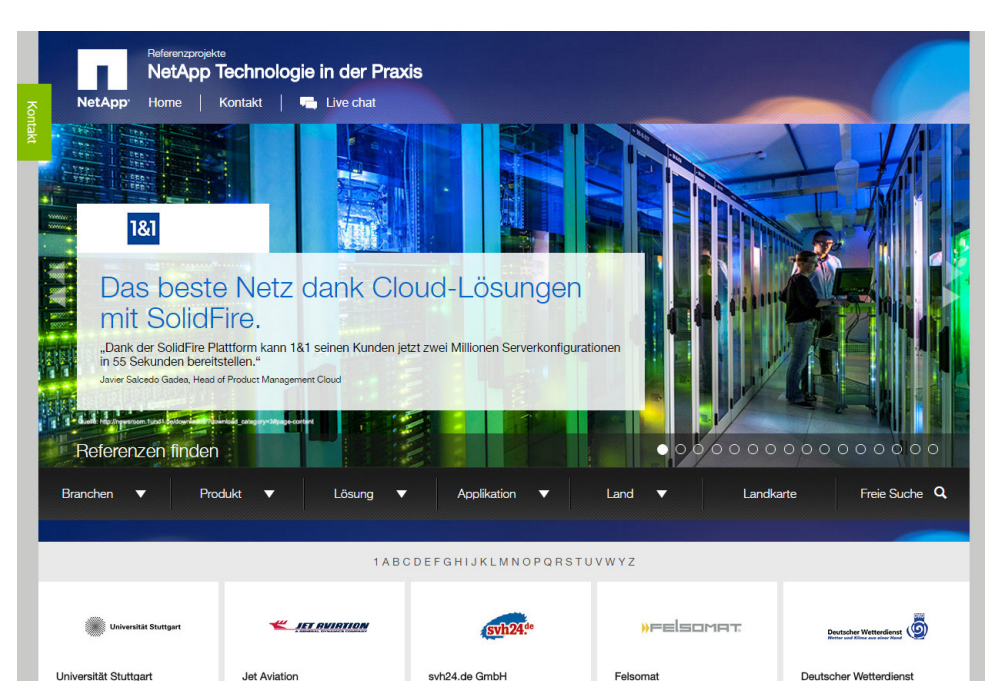

Roche Profile Center

This website is an internal Roche tool, through which Roche employees can register and then keep their details up to date, such as name and address but also a unified, email settings, preferences, interests. The site's goal is to serve as a unified login platform across the whole Roche network. It uses Eloqua as its database. I was the lead developer for this project.

Key features:

- Laravel framework
- direct Eloqua integration via RESTful API
- all the data is stored and pulled to the application from Eloqua (ex. dropdown list values, interests, user data, etc.)
- OAuth2 authentication
- extensive caching
- media optimization via Gulp build system
- account activation and Eloqua Double Optin system
- bi-directional field name mapping
- bower and composer package managers
- emails are sent from Eloqua
- served over HTTPS
- fully responsive front end
- custom Google Analytics event tracking

Netapp reference website

My first project at iris was to build a new reference website to display Netapp's success stories. The aim of the website is to showcase what Netapp helped the reference companies and what results they achieved thus to promote Netapp and get new clients.

Key features:

- Laravel backend, AngularJS frontend framework
- fully dynamic website, using RESTful API
- all data, including filters and filter options stored in MySQL DB
- media optimization via Gulp build system
- bower and composer package managers
- fully responsive front end
- custom Google Analytics event tracking

Testimonials

Working with Lehel means working with a highly professional expert who always goes the extra mile to turn a project into a success. His excellent grasp makes him a valuable provider even for extremely complex projects and he never fails to set expectations right.

As someone who has no developing knowledge I can confirm that he's the right person to perfectly translate given requirements into code and make it work seamlessly whilst never losing his good sense of humor.

—Nikola Pass, *Account manager*

I worked with Lehel for over year and a half in an advertising agency. We collaborated on a large variety of projects. He is a dynamic and gives professional, open for new technologies and very supportive. Lehel demonstrates creative thinking, is verbally expressive, and is fun to work with.

The quality of his work and content that he delivers is always top-notch.

—Thomas Kulka, *Web developer*

Lehel helped us with an important project. His frontend work was always of high quality and on time. I would like to work with Lehel again in the future and I can recommend him without hesitation.

—Patrick Gebhard, *Business Development Manager*

I worked with Lehel for almost 2 years at iris. He has a really solid character and he is very clear in his thoughts. Thanks to his broad knowledge and experience in web development he can take up any programming challenge and can finish anything he puts his mind to. He was a really good colleague and friend. I can definitely recommend him.

—Ionut Misa, *Web developer*
